

# GhostLayer

## Quick Start Guide

---

### Get Started in 4 Steps:

#### 1. Load Your Document

Drag & drop a PDF, DOCX, or TXT file onto the application window.

#### 2. Review Detection

GhostLayer automatically detects names, emails, phone numbers, and other sensitive data.

#### 3. Customize (Optional)

Click any term to add it to your Learning System for future documents.

#### 4. Copy & Use

Click 'Copy to Clipboard' and paste the safe text into ChatGPT, Claude, or any AI service.

---

### What Gets Detected:

- Names, emails, phone numbers, dates
- Passport numbers, INN, SNILS (Russia/Kazakhstan)
- Credit cards, IBAN, IP addresses
- Organizations, locations, URLs

### Pro Tip:

Use the Learning System! Click any word and select 'Remember Forever' to automatically mask it in all future documents. The more you teach it, the smarter it gets.
